SWR

Automated Conveyorized Reclaiming System

The Image Technology SWR 1000 is the most economical and proven unit on the market today with numerous printing facilities processing in excess of 1000 screens per day with these units.

The SWR 1000 is a custom built unit designed for your facilities individual needs. The SWR processes multiple sized screens up to 10ft x 20ft screens without carriages or adjustments. With speeds up to 9 feet per minute this unit is the fastest proven unit on the market. This completely self-contained stainless steel conveyorized unit effectively removes Emulsion, Ink, Dehazes (optional), Degreases (optional) and Dries (optional) screens increasing screen room production while eliminating employee exposure

Standard Features:

Standard Features include Chemical recirculation or per screen application, Blockout removal section, Emulsion removing Recirculation system or per screen application system, low noise (less than 70db) Programmable PLC controller enabling the user to operate system in any configuration along with remote access and production management tracking, The SWR systems have the lowest water and chemical usage of any system on the market.

Options:

Options: automatic loading and takeoff, liquid solid filtration eliminating chemical and emulsion sludge removal, dehazing section, degreasing and drying options. UL, CSA and CE Listing

Custom units built for any screen size.

Image Technology

The largest chemical and equipment manufacturer in North America.
